Portfolio

## Profile

I specialize in **React** and **TypeScript**. I value creative solutions, efficient code, and straightforward logic.

I started learning programming through **online academies**, applying what I learned to build **small projects** where I enjoyed experimenting.

This led me to discover **React** and the dynamism of **SPAs**.

Currently, I'm pursuing my **university degree in programming** while developing personal projects to explore new technologies and take on **challenges**.

I enjoy weighing different solutions to a problem, choosing the most effective one, and then **optimizing it thoroughly**.

I care deeply about building products that are **intuitive for the user**, look great on **any device**, and are **maintainable** in the long term.

## Projects

 **Muñelocos Racing** [↗](#), *JavaScript*

A speed-based game built with **Vanilla JavaScript**. Press the arrow keys **as quickly as you can** to reach the finish line before your opponents and advance to the **next level**.

 **Style Your Text** [↗](#), *ReactJS*

An intuitive and **easy-to-use styling tool**. Choose your styles while seeing changes in real time, then **copy and paste** the code directly **into your project**.

 **inTouch** [↗](#), *React / TypeScript*

**Chat room management**. Create and manage rooms, control user participation, and keep conversations organized.

"*Your team. Always. **inTouch**.*"

## Skills

### Languages & Frameworks:

React.js, TypeScript, JavaScript, HTML, Tailwind CSS

### Libraries & Tools:

Redux, React Query, React Router, Webpack, Vite

### Testing & Quality:

Jest, Testing Library, Performance Optimization, Accessibility (WCAG)

### Design & Workflow:

Responsive Design, Figma, REST APIs, Git, Agile/Scrum

### Languages:

English (Advanced)
